HELLO!

I'm a UX designer with 9 years of experience, 10 US patents and a wide set of skills. With a user-centric focus, I've honed my expertise in visual design, production, wireframing, user flows, prototyping and testing to delight end users and create memorable experiences.

I have proven myself to be innovative, free-thinking and dependable. I work well with fellow designers, developers and product managers. I enjoy solving complex problems and taking on new responsibilities.

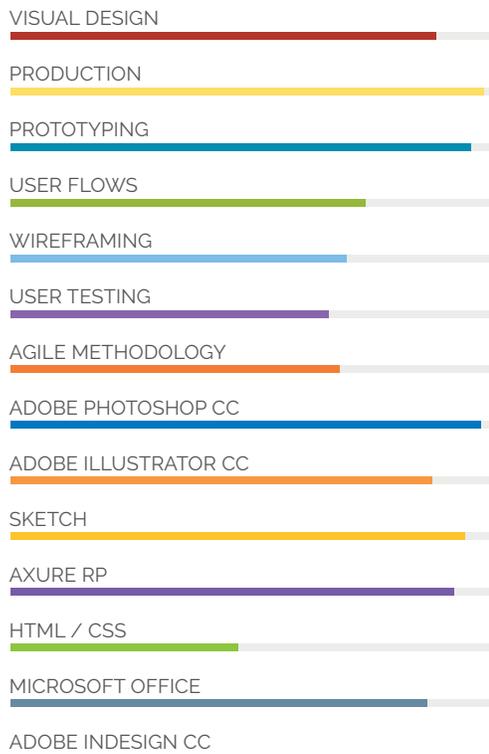

EDUCATION

Bachelors of Science, Graphic Design

Olivet Nazarene University
Bourbonnais, IL
Graduation, Dec 2005, GPA 3.5

SKILLS

Expert-Level

EXPERIENCE ([LinkedIn Profile](#))

Dec 2008 **TiVo**

Current **Senior UX Production Specialist**

At TiVo I started as a production designer, using best practices to create assets and pixel specifications for mobile, tablet and TV interfaces. I developed a strong relationship with product managers and engineering teams as well as firm knowledge of today's devices and their requirements.

I transitioned into a visual design role where I was able to leverage my knowledge of devices and interactions as well as my keen design sense to create compelling designs for web, mobile and TV interfaces while working closely with interaction designers and engineers.

In 2013, I was given full UX responsibilities for two major products in TiVo's catalog, iGuide and Passport. I was able to apply the knowledge that I've gathered from my peers and industry leaders to usher these legacy products into a new era. This major initiative involved a full redesign and the addition of several new features, including a back-office web tool. In over 10 million homes around the world, these two products continue to thrive in today's changing video content market. I was able to achieve this by focusing on the end-consumer's needs while playing nicely with business requirements. This involved user and market research, personas, innovation sessions, prototyping, testing, iterations, validations, fresh visual design and production while working in an agile environment.

I continue to help TiVo move forward by taking on responsibilities outside of my official role. I've created several proof-of-concept prototypes that help customers visualize the power and depth our data offerings at international trade shows year after year. I'm also an active participant in the company's patent program and have over 10 US patents to my name.

Jun 2007 **BerylMartin**

Dec 2008 **Production Artist**

At BerylMartin I worked with the art and print departments, primarily using Photoshop and Quark XPress, to create high quality print products for customers and various B2B materials with same-day turnaround. Most of this work was centered around print materials, branding and web design. Expertise in photo retouching was required for many jobs. I also served as the team copywriter for 8 months.

May 2006 **Applied Systems**

Jun 2007 **Multimedia Content Designer**

At Applied Systems I created online interactive tutorials for clients to assist them in learning how to use our complex automated insurance software. I often used Macromedia Authorware and Adobe Captivate. I also did the visual design for our department's websites, created custom tutorial templates as well as printed materials.
